

Overland Forage Oats S&W

Mid-late maturing forage oat with improved tiller production . Mid – late maturity High yielding variety High tiller density

Massive Forage Oats (Avena sativa) UMS

Massive is a modern forage-oat cultivar. Its enormous leaf is derived from a joint Australian/North American breeding program with the aim of providing good early feed but having the capacity to survive tough conditions

Blackbutt Cowra Seed & Grain

Dual purpose oat with early sowing & late maturing providing extended grazing with excellent grain recovery. Strong straw of a medium height, good frost resistance after grazing. Medium grain size and test weight. Good Hay production.

Outback Forage Oats S&W

Mid-late maturing forage oat. Excellent establishment vigour, late maturity Wide leaf and good digestibility Good recovery from grazing

Bronco Forage Oats S&W

Bronco is a fast establishing autumn-spring growing fodder crop with high feeding value, and high leaf to stem ratio. It's a great choice for grazing, silage, and hay production.

Yarran Cowra Seed & Grain

Yarran is dual purpose medium height earlier maturing. Large grain with high test weight, good protein %. Low husk lignin content for digestibility. Good hay production.

Boss Forage Oats Elders

Boss is a high tillering oat and can withstand warmer soil plantings. Boss can produce high dry matter production after second and third grazings. Ideal hay or early plant grazing oat.

Severn Forage Wheat S&W

Severn Winter Wheat is the perfect early plant option for winter and spring grazing, as well as hay and silage production. Severn is an awnless forage wheat promising excellent forage yields, strong straw strength with excellent standability, and dense tillering.

DS Bennett Winter Wheat S&W AGF

Dual-purpose variety. Early plant, long season. A high-yield, awnless winter wheat ideal for graze & grain, or straight grain production.

Accroc Winter Wheat AGF

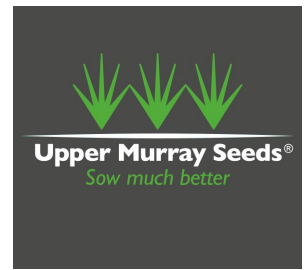

RGT Accroc is a bearded, medium-long growing season winter wheat with potential for high yields in the medium and high rainfall zone.

Manning Winter Wheat AGF

Manning is a long season dual purpose grazing/grain variety capable of producing large quantities of forage for grazing and high grain yields. Its white grain satisfies a strong demand within the dairy and other intensive industries. Its long growing season makes it highly suited to irrigation where large yields are required.

Endeavour Triticale AGF

A dual purpose triticale with excellent dry matter production and grain recovery after grazing. Endeavour is adapted to long season grazing environments across Australia.

Astute Triticale AGT

Astute (TSA0466) is a mid season maturing triticale, with a similar maturity to Hawkeye. Astute is widely adapted to all triticale growing regions, showing outstanding yields in higher yield potential areas of NSW.

Harpoon HV Forage Barley (Hordeum vulgare) UMS

Harpoon is a new awnless forage barley bred to suit grazing and hay production enterprises around Australia. Harpoon produces significant quantities of dry matter (DM) and is later maturing than other forage barley varieties.

Moby Forage Barley S&W

Moby Forage Barley is an early maturing, 6 row, white seeded awnless barley with excellent winter growth and rapid establishment.

Planet Barley AGF

RGT Planet barley is a new high yielding spring barley being introduced into Australia. It has a strong agronomic package that combined with its yield potential will make it an economic option for Australian barley growers. Malt classified.

Urambie Waratah Seeds

dual purpose - graze with excellent feed grain recovery, suited to early sowing true winter habit, with a cold requirement for head initiation

Kraken Forage Barley S&W

Kraken Forage Barley has fine stems and produces lots of tillers, resulting in a highly digestible forage and hay. Boasting excellent early vigour, you can sow it late and still graze it early to fill your early winter feed gap

Atomic Annual Ryegrass (Lolium multiflorum) UMS

Atomic is exceptionally fast out of the ground and has prolific winter growth. A mid-maturing, annual tetraploid, Atomic produces excellent hay and silage and is a variety you can trust and rely on every time you sow it.

Awesome Short Term Ryegrass (Lolium multiflorum) UMS

Awesome is a true Italian ryegrass designed for high yield and an extended season into summer. Awesome is easy to establish and recovers well after grazing.

Jackpot Italian Ryegrass DLF

Jackpot is a new diploid Italian ryegrass bred by DLF Seeds Australasian breeding program. It was bred to replace the long standing favourite Icon Ryegrass.

Mona Italian Ryegrass DLF

Jackpot is a new diploid Italian ryegrass bred by DLF Seeds Australasian breeding program. It was bred to replace the long standing favourite Icon Ryegrass.

Jivet Italian Ryegrass

Jivet Tetraploid Annual Italian Ryegrass - Short term pasture and high-yielding silage/hay crop.
